TRENDS IN AGRICULTURAL INCOME INDICATORS

1973 - 1984

These results reflect the situation as seen at 20 February 1985 .

Publication date: 20.2.1985

Eurostat ☐ L - 2920 Luxembourg

FOREWORD

In this document, EUROSTAT (Statistical Office of the European Communities) presents a brief analysis of the most recent trends in the main indicators of agricultural income in the Community.

The document contains an overview for the Community as a whole and, for the first time, for certain Member States of the most recent trends in the indices relating to net income from agricultural activity, of the holder and his family and that of total agricultural activity (for remunerated and unremunerated work). Results are also provided which show the trend of the traditional income indicator: net value added at factor cost, both in real terms and per capita. This report also provides information on trends in agricultural income between 1973 and 1984, whilst at the same time pinpointing the reasons for the changes over the past few years (the effects of volume and prices).

The second part of this document discusses the methodological significance of the indicators used in this analysis.

I. COMMUNITY RESULTS¹

1. Change in the net income from agricultural activity of the holder and members of his family in 1984 as compared with 1983

Following the sharp decline in 1983 (-14%), current estimates for 1984 indicate a nominal increase in the net income of the unremunerated agricultural labour force (mainly consisting of the holder and members of his family) in the Community² of an average of 8.3% over 1983 (see Table 1). According to current figures, this labour force continued to decline in 1984 (-1.6%); as a result, per capita net income increased by 10.1%. After deflating this rate of change with the average rate of increase in prices (inflation rate³) in the Community, which is estimated at 5.6%, the net income from agricultural activity of the holder and members of his family in 1984 increased by 4.3% in real terms.

TABLE 1: Estimated net income from agricultural activity of the holder and members of his family in 1984: rate of change as compared with 1983 (in %)

Country and forecast date	Nominal net income from agricultural activity	Unremunerated agricultural labour force input	Nominal per capita net income from agricultural activity (1:2)	Implicit price index of gross domestic product at market prices (deflator)	Real per capita net income from agricultural activity (3:4)
	1	2	3	4	5
D (29. 1.85)	+8.7	-1.0	+9.8	+1.9	+7.8
F (21.11.84)	+6.6	-1.9	+8.7	+7.0	+1.6

NL (8. 1.85)	+12.0	-1.0	+13.1	+3.1	+9.7
B (4. 2.85)	-4.0	-1.0	-3.0	+5.4	-8.0
L (10.12.84)	+2.6	-2.0	+4.7	+5.9	-1.1
UK (9. 1.85)	+21.6	+0.9	+20.5	+3.7	+16.2
IRL	:	:	:	+6.6	:
DK (23. 1.85)	+327.0	-2.6	+338.4	+5.7	+314.8
GR	:	:	:	+18.1	:
EUR 10 *	+8.3	-1.6	+10.1	+5.6	+4.3

¹ The agricultural income indicators referred to below in sections 1 and 2 are obtained by successively deducting from the net value added at factor cost the rents and interest paid by farmers, then employees' remuneration, and by dividing the result by the appropriate agricultural labour force input. See Part II for more details.

² Not including Ireland and Greece for which no estimates of income and/or labour input are available.

³ Implicit price index of gross domestic product at market prices.

* Not including Ireland and Greece.

A rapid analysis of 1983-84 trends in the net income from agricultural activity of the holder and members of his family shows an increase in five out of eight Member States - in some cases much higher than the Community average of +4.3% (against -13.5% in 1983 as compared with 1982).

Denmark	+314.8% (-58.2% in 1983)
United Kingdom	+ 16.2% (-20.1% in 1983)
Netherlands	+ 9.7% (not available in 1983)
FR of Germany	+ 7.8% (-34.1% in 1983).

The very high increase in income for Denmark is due to the fact that the rates of change are calculated from low residual absolute values.

There was also an increase in France, of +1.6% (-9% in 1983) which is below the Community average.

Decreases were registered for:

Belgium	-8.0% (+4.7% in 1983)
Italy	-5.7% (-0.9% in 1983)
Luxembourg	-1.1% (-17.3% in 1983).

2. Change in net income from agricultural activity of all persons working in agriculture in 1984 as compared with 1983

It is estimated that in 1984 the net income from agricultural activity in the Community (EUR 10⁴) of all persons working in agriculture increased by an average of 3.2% in real terms and per capita as compared with 1983 (see Table 2). The lower rate of increase of this income indicator as compared with that of the income of the holder and members of his family can be explained by the lower average increase in nominal net income (+6.8%) which could not be offset with the decrease in the total agricultural labour force (-2.0%), whilst the deflation rate remained the same. The rates of this income indicator for each country are also positive and generally above the Community average except in the case of Belgium, Italy and Luxembourg.

Table 2: Estimated net income from agricultural activity of all persons working in agriculture in 1984: rate of change as compared with 1983 (in %)

Country and date of estimate	Nominal net income from agricultural activity	Total input of agricultural labour force	Nominal per capita net income from agricultural activity (1:2)	Implicit price index of gross domestic product at market prices (deflator)	Real per capita net income from agricultural activity (3:4)
	1	2	3	4	5
D (29. 1.85)	+7.1	-1.6	+8.8	+1.9	+6.8
F (21.11.84)	+6.2	-1.9	+8.3	+7.0	+1.2

GR	:	:	:	+18.1	:
EUR 10 *	+6.8	-2.0	+9.0	+5.6	+3.2

⁴ Not including Ireland and Greece, for which no estimates of income and/or labour force input are available.

* Not including Ireland and Greece.

3. Change in net value added at factor cost in agriculture in 1984 as compared with 1983

The latest estimates indicate that in 1984, the real and per capita net value added at factor cost in agriculture within the Community increased by an average of 4.3% as compared with 1983 when there was a decrease of 6.1% as compared with 1982 (see Table 3).

The net real and per capita value added at factor cost in agriculture was higher than in 1983 in the following countries:

Denmark	+35.5% (-16.2% in 1983)
Greece	+11.6% (-11.6% in 1983)
United Kingdom	+10.1% (- 7.5% in 1983)
Ireland	+ 7.4% (+ 4.7% in 1983)
Netherlands	+ 6.0% (+ 1.8% in 1983)
FR of Germany	+ 5.7% (-21.5% in 1983)
France	+ 2.1% (- 4.6% in 1983)

As we have seen above (Tables 1 and 2) the change in France was lower than the Community average. Furthermore, the change was negative for:

Belgium	- 6.5% (+3.7% in 1983)
Italy	- 1.1% (+0.3% in 1983)
Luxembourg	- 0.5% (-15% in 1983)

TABLE 3: Estimated net value added at factor cost in agriculture in 1984: percentage rates of change as compared with 1983

Country and date of estimate	Nominal net income from agricultural activity	Total agricultural labour force input	Nominal per capita net income from agricultural activity (1:2)	Implicit price index of gross domestic product at market prices (deflator)	Real per capita net income from agricultural activity (3:4)
	1	2	3	4	5
D (29. 1.85)	+6.0	-1.6	+7.7	+1.9	+5.7
F (21.11.84)	+7.1	-1.9	+9.2	+7.0	+2.1
I (26.11.84)	+5.7	-3.3	+9.3	+10.5	-1.1
NL (8. 1.85)	+8.5	-0.7	+9.3	+3.1	+6.0
B (4. 2.85)	-2.5	-1.0	-1.5	+5.4	-6.5

UK (9. 1.85)	+13.3	-0.8	+14.2	+3.7	+10.1
IRL(22. 1.85)	+11.6	-2.5	+14.5	+6.6	+7.4
DK (23. 1.85)	+39.6	-2.6	+43.2	+5.7	+35.5
GR (Nov. 84)	+27.6	-3.2	+31.8	+18.1	+11.6
EUR 10	+7.7	-2.2	+10.1	+5.6	+4.3

4. Reasons for the increase in agricultural income in 1984

In 1984, final agricultural output increased:

- in value by 7.2%
- in volume by 3.6%
- the average price increased by 3.5%, which is lower than the implicit price index of gross domestic product at market prices (inflation rate): +5.6%.

One of the main reasons for the increase in agricultural income is the substantial increase in the volume of crop output (+8.5%).

TABLE 4: 1984/83 rates of change due to volume effects in %

	D	F	I	NL	B	L	UK	IRL	DK	GR	EUR 10
Final crop output	+17.7	+9.3 ⁵	-3.9	+7.5	+10.0	+26.9	+21.6	+15.1	+62.7	+9.5	+8.5
Final animal output	-2.2	+2.1 ⁵	+0.6	+1.0	+1.9	-1.1	-2.7	+2.7	-1.5	-1.5	-0.1
Total final output	+3.6	+5.0 ⁶	-2.0	+3.0	+4.6	+3.7	+5.9	+4.8	+15.4	+5.9	+3.6
Intermediate Consumption	+0.1	+0.9	-1.5	+0.0	-0.3	-5.2	-0.6	+0.2	+1.5	+3.5	+0.1

The volume of final crop output increased especially in:

Denmark	+62.7%
Luxembourg	+26.9%
United Kingdom	+21.6%
FR of Germany	+17.7%
Ireland	+15.1%

A lower increase was recorded for:

Belgium	+10.0%
Greece	+ 9.5%
France	+ 9.3%
Netherlands	+ 7.5%.

The only country with a decline in volume is Italy (-3.9%) which accounts for about 30% of the final crop output of the Community. The increase in the

volume of final crop output is largely due to the spectacular expansion in the volume of final cereal output (28.2%) in the Community.

⁵ Sales only.

⁶ Including changes in stocks and gross fixed capital formation of agricultural equipment.

TABLE 5: 1984/83 rates of change due to volume effects for the main crop products in %

EUR 10

Final crop output	+ 8.5%
Cereals	+28.2%
Root crops	+14.3%
Fresh vegetables	+ 2.3%
Fresh fruit	- 2.1%
Grape must and wine	- 7.6%
Olive oil	-25.4%

The effect of this trend in cereal output was as follows in the various countries:

Very marked	Luxembourg	+133.6%
	Denmark	+111.0%
Marked	FR of Germany	+ 42.6%
	Greece	+ 28.8%
	United Kingdom	+ 28.7%
	Ireland	+ 26.9%
	Belgium	+ 26.6%
	France	+ 21.2%
Less marked	Italy	+ 14.2%
	Netherlands	+ 5.0%.

Increases in output were also recorded for root crops in Luxembourg (+50%), Germany (+29%), Denmark and the Netherlands (+26% and +24%), Belgium (+18%), the United Kingdom (+15%), France and Ireland (+8%). Falls in output are estimated for Italy and Greece (-1% to -14%).

Wine production was down by -7.6% for the Community as a whole, with falling figures for all countries except Greece (+11.3%):

FR of Germany	-38%
Luxembourg	-17.8%
Italy	- 6%
France	- 2.8%.

In the case of olive oil, a fall in overall production of 25.4% was recorded, with Greece's increase of 15% not fully offsetting Italy's decrease of -40%.

As far as livestock production is concerned, the volume of production in the Community as a whole has remained stable (-0.1%) with only slight variations from country to country: ranging from -2.7% for the United Kingdom to +2.7% for Ireland.

TABLE 6: 1984/83 rates of change in the main livestock production due to volume effects in %

EUR 10

Final livestock production	-0.1%
Cattle and calves	+2.5%
Pigs	+0.6%
Sheep and goats	+0.4%
Poultry	0.0%
Milk	-2.4%
Eggs	-0.7%

Milk production fell in all producing Member States except in Luxembourg (+3.5%), Ireland (+4.1%) and Italy (+0.5%).

The sharpest declines were recorded in the United Kingdom (-6.1%), Denmark (-3.7%) and Germany (-3.5%).

Beef production, on the other hand, increased by +2.5% for the Community as a whole, with the sharpest increases occurring in France (+8.7%), Belgium (+5%) and Denmark (+4.2%). On the other hand, decreases were recorded in Luxembourg (-8.2%) and Greece (-7.3%).

The rate of change due to price (see Table 7) was generally 3.5% higher for final output in agriculture within the Community. This rate, which represents the average change in the prices of agricultural production was particularly high in Greece (+20.1%) and Italy (+8.3%). In other countries (France, Netherlands, Luxembourg, United Kingdom, Ireland and Denmark) the increase was below the Community average whereas a negative rate of change was recorded in Germany (-1.9%) and Belgium (-1.7%).

TABLE 7: Rate of change of final output in agriculture due to price effects as compared with the price index of GDP

Country	Rate of change due to price of agricultural production	Implicit price index of GDP
FR of Germany	- 1.9	+ 1.9
France	+ 2.7	+ 7.0
Italy	+ 8.3	+10.5
Netherlands	+ 2.5	+ 3.1
Belgium	- 1.7	+ 5.4
Luxembourg	+ 0.6	+ 5.9
United Kingdom	+ 1.2	+ 3.7
Ireland	+ 2.6	+ 6.6
Denmark	+ 1.8	+ 5.7
Greece	+20.1	+18.1
EUR 10	+ 3.5	+ 5.6

Table 7 compares the rate of change of agricultural prices with the overall inflation rate of each Member State. The inflation rate for the economy in general was higher than the rate of change for agricultural production for both the Community as a whole and all Member States except Greece.

The increase in the prices of crop production (see Table 8) was 3.4% for the Community as a whole and was especially high in Greece (+19.5%), Italy (+8.4%) and the Netherlands (+5%). On the other hand, there were marked decreases especially in Belgium (-10.3%), Denmark (-6.5%), Germany (-3.5%) and the United Kingdom (-3.1%).

As far as individual products are concerned, there was a fall in the price of cereals (-3.9% for the Community) especially in the Netherlands (-10.5%), Belgium (-9.3%) and Germany (-7.8%) as compared with a marked increase in Greece (+15.7%) and Italy (+9.5%).

With regard to the other products, a general increase was recorded especially for vegetables (+8.7%) and olive oil (+7.5%).

TABLE 8: 1984/83 rate of change due to price effects in %

Country	Final crop output	Final animal output	Final output
FR of Germany	-3.5	-1.1	-1.9
France	+1.0	+4.3	+2.7
Italy	+8.4	+8.3	+8.3
Netherlands	+5.0	+1.0	+2.5
Belgium	-10.3	+2.9	-1.7
Luxembourg	-4.7	+2.0	+0.6
United Kingdom	-3.1	+3.5	+1.2
Ireland	-1.2	+3.7	+2.6
Denmark	-6.5	+6.8	+1.8
Greece	+19.5	+21.4	+20.1
EUR 10	+3.4	+3.3	+3.5

The prices of animal production increased by + 3.3% for the Community as a whole and fell only in Germany (- 1.1%).

All product prices increased in the Community as a whole except for cattle (- 1.4%). The sharpest increase was that of eggs (+ 17.9%).

Table A.3 of the Annex provides details of the price changes for each category of products and country.

Intermediate consumption (see Table 9), i.e. the total current purchases of goods and services used for final output in agriculture, increased for the Community as a whole by + 6.2% in value and + 0.1% in volume between 1983 and 1984, resulting in a price increase of + 6.1%.

TABLE 9: Changes in value, volume and price of intermediate consumption in agriculture

Country	Value	Volume	Price
FR of Germany	+3.1	+0.1	+3.0
France	+8.7	+0.9	+7.7
Italy	+9.1	-1.5	+10.8
Netherlands	+3.0	0.0	+3.0
Belgium	+6.3	-0.3	+6.6
Luxembourg	+0.5	-5.2	+6.0
United Kingdom	+3.0	-0.6	+3.6
Ireland	+6.1	+0.2	+5.9
Denmark	+8.0	+1.5	+6.4
Greece	+23.0	+3.5	+18.8
EUR 10	+6.2	+0.1	+6.1

The prices of intermediate consumption increased more quickly than inflation in the Community and most of the Member States except for Ireland. The increase in the prices of intermediate consumption was especially marked in Greece (+ 18.8%), and Italy (+ 10.8%) whilst it remained at between + 6% and + 8% in France, Belgium, Luxembourg, Ireland and Denmark, and was relatively moderate in Germany and the Netherlands (+ 3%) and in the United Kingdom (+ 3.6%).

Among the products of intermediate consumption, energy products, animal feedstuffs and fertilizers had the highest price increases.

If the rate of change due to price of final output of agriculture is compared with the equivalent rate for intermediate consumption, the resulting ratio indicates the terms of trade of agricultural production.

TABLE 10: Terms of trade of agricultural production in 1984

1983 = 100

	D	F	I	NL	B	L	UK	IRL	DK	GR	EUR 10
Price of final output	98.1	102.7	108.3	102.5	98.3	100.6	101.2	102.6	101.8	120.1	103.5
Price of intermediate consumption	103.0	107.7	110.8	103.0	106.6	106.0	103.6	105.9	106.4	118.8	106.1
Terms of trade	95.2	95.4	97.7	99.5	92.2	94.9	97.7	96.9	95.7	101.1	97.5

In 1984, with the exception of Greece (+ 1.1%) the terms of trade deteriorated in all countries, especially in Belgium (- 7.8%), Luxembourg (- 5.1%), Germany (- 4.8%) and France (- 4.6%).

As regards the productivity of intermediate consumption, obtained by comparing the index of the volume of final output with the index of the volume of intermediate consumption, there was a general recovery as compared with the previous year. Productivity increased by + 3.5% for the Community as a whole with changes ranging from + 13.5% in Denmark to - 0.5% in Italy.

TABLE 11: Productivity of intermediate consumption in 1984

1983 = 100

	D	F	I	NL	B	L	UK	IRL	DK	GR	EUR 10

MEMBER STATES

Years	D	F	I	NL	B	L	UK	IRL	DK	GR	EUR 10
1973-79	2.3	5.3	7.8	4.6	3.0	3.0	2.3	15.9	4.5	18.4	4.3
1980-83	1.5	3.8	6.1	4.1	2.4	2.9	1.9	9.7	4.2	17.8	3.4
1984	1.4	3.6	5.6	4.4	2.3	2.9	1.9	10.2	4.9	18.3	3.3

The contribution of the net value added at factor cost of agricultural activity has been declining constantly by comparison with the net domestic product of the economy as a whole.

Between 1973 and 1984 it dropped from 5.2% to 3.3% for the Community as a whole. The countries for which the contribution of the value added of agriculture is lowest are Germany (1.4%) and the United Kingdom (1.9%), whereas it has remained relatively high in Ireland (10.2%) and especially in Greece (18.3%).

5. Trends in agricultural income for 1973 to 1984

The income of the agricultural holder and his family (see Table A.6.) from their agricultural activity fell constantly between 1973 and 1981 in the Community as a whole (- 5.8% per annum on average); since then, this variable has fluctuated, increasing in 1982, falling in 1983 and increasing again in 1984, to revert to the average level for the years 1979-1980-1981.

In Germany, the fall in income was contained until the end of the 1970s and became much more marked between 1978 and 1980. After a sharp rise in 1982, the decline has continued over the past two years.

In France, the trend in income fell sharply towards the middle of the 1970s, a second decline was felt in 1980 and 1981 and there was a slight recovery between 1982 and 1984.

In Italy, there has been a constant decline since 1973 with the lowest level since 1973 reached in 1984.

In Belgium and Luxembourg, the trend in income has fluctuated to settle at a relatively high level over the past few years.

In the United Kingdom, income fell sharply towards the end of the 1970s but has recovered slightly over the past few years.

As regards the income of all persons working in agriculture (see Table A.6.) from their agricultural activity, this has also declined constantly for the Community as a whole since 1973, in spite of slight recovery in 1982.

¹ Not including the Netherlands, Ireland and Greece.

6. Trends in total and per capita net value added for 1973 to 1984 (see Tables A.7 to A.17)

In real terms, i.e. after deflating with the implicit price index of the GDP (base year 1980), net value added of agriculture fell constantly, by 26% between 1973 and 1984, or - 2.7% per year.

TABLE 13: Trends in total net value added and trends per capita

"1980" ⁸ = 100

Years	Real total net value added	Total agricultural labour force	Real per capita net value added
1973	132	118	112
1974	117	115	102
1975	115	111	104
1976	116	110	106
1977	111	107	105
1978	112	105	107
1979	106	102	104
1980	97	100	97
1981	97	98	99
1982	104	95	109
1983	96	94	103
1984	98	92	107

The labour force indicator has also declined constantly (-2.2% per year) since 1973. The per capita net value added has remained relatively stable over the past 12 years.

Table 14 summarizes the trend of this indicator (per capita value added) in the different Member States.

⁸"1980" = average of the years 1979, 1980 and 1981.

Average annual rates of change

1973-75	-0.6	-9.1	+1.7	-5.3	-8.4	-5.2	-6.2	+2.5	-12.9	-0.9	-3.9
1976-79	-5.8	+0.6	+4.2	-4.9	-6.5	+6.8	-5.3	-0.1	+1.9	0.0	-0.7
1980-84	+1.2	+2.7	-1.2	+8.2	+4.4	+6.0	+4.4	+5.8	+10.8	+3.7	+2.4

The trend is negative in Italy and Germany, whereas figures remain around the Community average in France following a slight improvement over the past few years. In the other countries, the trend has remained positive especially in Denmark, the Netherlands, Belgium, Ireland and Luxembourg.

One final aspect of this analysis concerns the 1973-84 trends in the indicators "terms of trade" and "productivity" of intermediate consumption. It should be remembered that the first indicator corresponds to the ratio between the implicit price index of final agricultural output and the implicit price index of intermediate consumption, whereas the second indicator corresponds to the ratio between the index of the volume of final output and that of intermediate consumption.

Table A.4 in the Annex shows the trends in the terms of trade (or the "price scissors") for each Member State up to 1984, by comparison with the 1979-1981 period.

There has been an overall gradual decline which means that the implicit price index of goods and services for intermediate consumption is rising more rapidly than that of final output.

As regards the productivity of intermediate consumption (Table A.5), following a decline in the second half of the 1970s, the volume of production for the Community as a whole has tended to grow more rapidly than the volume of intermediate consumption in recent years. This trend is fairly general but does not apply to Greece, where the decline in productivity has continued into the most recent years.

⁹"1980" = average for the years 1979, 1980 and 1981.

II. METHODOLOGY

In this document, the Statistical Office of the European Communities (SOEC) presents the estimates for the change in agricultural income in the Member States.

These estimates are based on rates of change of three indicators:

- net value added at factor cost
- net income from agricultural activity and
- net income from agricultural activity of the holder and his family.

Gross and net value added at factor cost in the production branch 'Agriculture' are computed as follows:

Final output
- intermediate consumption
= Gross value added at market prices
+ subsidies
- taxes linked to production
= gross value added at factor cost
- depreciation
= net value added at factor cost

As regards the additional indicators, it should be pointed out that in economic accounting terms:

Net value added at factor cost
- Rents and interest payments
= Net income from agricultural activity (a)
- Wages and salaries paid
= Net income from agricultural activity (b)
of the holder and his family.

- (a) represents the total resources available to holders for remuneration of labour (his own, that of the members of his family and the hired workforce) and of his own capital, including any profit deriving from farming activity. When divided by the total agricultural labour input, the first of the two additional income indicators is obtained;

- (b) comprises the remuneration of the factors of production (land, capital and labour) belonging to the holder and his family, including the net operating profit of the holding. When divided by the agricultural labour input of the unremunerated workforce, the second additional income indicator is obtained.

The following methodological points should be borne in mind when considering the data contained in the document:

- Figures have been compiled according to the principle of the Economic Accounts for Agriculture, which form part of the European System of Integrated Economic Accounts (ESA). Complete harmonization of absolute data between countries has not yet been achieved, however, although the rates of change are considered to be comparable.
- National results already published in Member States (for example France) may differ significantly from the estimates shown here because of a different treatment of changes in stocks or other elements.
- In the text and table headings, 'per capita' is to be interpreted as 'per unit of agricultural labour input of the labour force'.
- The data cover the relative changes in a given calendar year as compared with the previous year. They thus comprise elements from two crop years.
- The forecasts were made by experts in the Member States on the basis of such evidence as was available on changes between 1983 and 1984 in the prices and volumes of the various components of nominal net value added at factor cost, and in the work input of the agricultural labour force.
- The data cover the production branch 'Products of agriculture and hunting' and not the activity sector 'Agriculture', which may be taken in very general terms to be the total of economic activities of agricultural holdings.
- Net value added at factor cost in agriculture comprises the total of the factor incomes in the agricultural production branch arising from agricultural activity.

- This income parameter is not, however, an indicator of the total household income of those engaged in farming. It should be noted that in addition to their purely agricultural income in the strict sense, agricultural holdings or households may also receive incomes from other sources.
- The average rates of change for agricultural gross and net value added in the individual Member States and in the Community as a whole give no indication of the differences between regions and types of farm within the Member States.
- The data on the relative change in real per capita gross and net value added at factor cost and of the two additional real income indicators are obtained by deflating the corresponding nominal rates of change by the implicit price index of gross domestic product at market prices. The relevant figures were supplied by the Directorate-General for Economic and Financial Affairs of the Commission of the European Communities. The real rates of change do not represent the results of a computation in volume terms and are not, therefore, forecasts of the changes in gross and net value added at constant prices; they are, on the contrary, indicators of the changes in the real value of agricultural income. The question of how best to remove the effects of inflation has been discussed in detail on several occasions by the relevant SOEC working party, which has concluded that for the purposes of deflating nominal agricultural income there is, at present, no more appropriate price index available than the above-mentioned 'implicit price index of gross domestic product at market prices'. (1)

The estimates are subject to a margin of error which increases as the definitions of the numerator and denominator of each ratio are progressively narrowed. Thus the indicators of real gross and net value added at factor cost, per unit of labour input are regarded as more reliable than the indicator 'net income from agricultural activity per unit of total agricultural labour input', while the latter, in turn, is considered more reliable than the indicator 'net income from agricultural activity of the holder and his family per unit of unremunerated agricultural input'.

(1) The method of calculating this deflator for EUR 10 is based on P.P.S. (Purchasing Power Standards). For the calculation of the Community totals of gross domestic product, both at current and at constant prices, ECU (European Currency Units) are no longer used and have been replaced by P.P.S.

Finally, the real rates of change in value added for the Community (EUR 10) have been calculated as the weighted average of the ten national real rates of change. The weighting factors used in calculating the 1984 results were the relative contributions of the Member States to agricultural gross and net value added at factor cost in the Community in 1983 (at current prices) i.e.:

	<u>EUR 10</u>	
	<u>Gross value added at</u>	<u>Net value added at</u>
	<u>factor cost</u>	<u>factor cost</u>
Federal Republic of Germany	14.30	11.37
France	24.63	24.79
Italy	28.07	29.33
Netherlands	7.19	7.80
Belgium	2.68	2.95
Luxembourg	0.12	0.12
United Kingdom	10.78	10.20
Ireland	2.28	2.41
Denmark	3.06	2.82
Greece	6.88	8.21
	<u>100.00</u>	<u>100.00</u>

The real rates of change of the two additional income indicators for the Community (EUR 10) were calculated in a similar manner, as weighted averages of the ten real national rates of change. The weighting factors used in calculating the 1984 results correspond to the relative contributions of the individual Member States in 1983 in respect of 'net value added at factor cost minus rent and interest payments' and the 'net value added at factor cost minus rent, interest payments and wages and salaries paid' for the Community as a whole at current prices.
